Rawwater comes of age! 2000 – 2018

It's hard to imagine that eighteen years have gone by since our MD, Dr Bob Eden, launched Rawwater from his garden shed. (Even though it was a largish garden shed!)

From those beginnings in June 2000, we've grown to become a leading name in oilfield reservoir souring simulation and souring forecasting.

While, through our expertise in expanding metal technology, we're casting novel metal alloys underwater – and creating further alloys to provide secure, high integrity, reversible seals for use in the nuclear industry.

Today, from our headquarters in Warrington UK and our office in Houston Texas, we're ideally placed to share our expertise with oil and gas majors globally.

With scientists, metallurgists, engineers and researchers on our team – not to mention partnerships with leading universities – we're also considerably bigger than we were 18 years ago.

Yet although we may be bigger, one thing remains the same: our commitment to providing personal service, support and tailored solutions for our customer base.

Whether you're a relatively new Rawwater customer or you've been with us since day one, we'd like to thank you for your support. And remember, whether it's Steve Jobs' garage, Mike Dell's dorm room, or even Bob Eden's shed, some of the best ideas start from simple beginnings.
